5. Waste Recycle System:

Glass, tin, paper, tetra packs and waste plastic are segregated manually with accuracy and sold to trash buyers by weight for recycling. A portion of paper, plastic, and metal waste are systematically collected and repurposed into useful products. Waste paper is recycled into file covers, while plastic waste is processed to create durable seating benches and bricks. These eco-friendly practices not only reduce pollution but also encourage responsible waste management and sustainability within the community.
