Program Outcomes, Program Specific Outcomes, Course Outcomes

MPH (Masters in Public Health)

ringian Outcome Sills For collecting and interpreting information related to health, policy planning and development skills to address public health challenges, communication skills for advocacy, dissemination and evaluation of public health data and information, financial planning and management skills for running public health programs in the country. Program Specific Outcome	Drogram Outcome	The source will help condidate to develop
information related to health, policy planning and development skills to address public health challenges, communication skills for advocacy, dissemination and evaluation of public health data and information, financial planning and management skills for running public health programs in the country. Program Specific Outcome The students will acquire the necessary skills to work as Epidemiologists, Public Health Consultants, Public Health Administrator, Public Health Administrator, Public Health Researcher, NGO manager at local and national level. They can also contribute to the process of policy making by disseminating their research findings to policy makers. Courses: MPH Principles and Practices of Public Health To analyse and implement principles of public health to practice and its impact on population health, equalities and quality of healthcare. Helps the students to understand the policy process and policy environment within and outside the countries Health Management: Management Principles and Practices (Strategic management Demography and Population Sciences Helps to understand the administration, oversight of health systems, public health systems and entire hospitals and other medical facilities. Helps to understand the ize, structure and inovement of population over time and its relation to health Helps to understand the traditional techniques of statistics applied to subject of public health To understand the determinants of disease and causes which influence disease occurrence Introduction to Health Economics To understand the determinants of disease and causes which influence disease occurrence Introduction to Approaches and Methods To engage the individuals and communities as well as empower them to choose healthy behaviour Introduction to Financial Management and	Program Outcome	The course will help candidate to develop
and development skills to address public health challenges, communication skills for advocacy, dissemination and evaluation of public health data and information, financial planning and management skills for running public health programs in the country. Program Specific Outcome The students will acquire the necessary skills to work as Epidemiologists, Public Health Consultants, Public Health Administrator, Public Health Researcher, NGO manager at local and national level. They can also contribute to the process of policy making by disseminating their research findings to policy makers. Courses: MPH Principles and Practices of Public Health Principles and Practices of Public Health Introduction to Health System and Policy in Developing Countries Introduction to Health Management Health Management: Management Principles and Practices (Strategic management Demography and Population Sciences Principles of Social Research Methods and Basic Biostatistics Principles of Social Research Methods and Basic Epidemiology To understand the determinants of disease and causes which influence disease occurrence Introduction to Health Economics To engage the individuals and communities as well as empower them to choose healthy behaviour Introduction to Financial Management and

	1
	organisations to improve patient care and
	minimise risk
Social and Behaviour Change, Effective	Details the information on how interventions
Communication in Health Care	in public health can be used to improve
	health behaviour in the population
Reproductive, Maternal Health, Child	It focuses on the measures taken to improve
Health and adolescent (RMNCH+A)	maternal and child health which not only
	benefits them but also strengthens families
	and communities
Introduction to Health Programs and	It includes how comprehensive health
evaluation	programs are used to achieve the health of the
	population
Environment and Occupational Health	It helps to understand how does physical,
	social and work environment has a bearing
	on health of the individuals and population
Law and Ethics in Public Health	Details the best legal practices available for
	the benefits of the patients
Elective Subjects	
Epidemiology	It helps to understand the distribution of
	diseases with more advanced applications.
Health program, Policy and Planning	Helps the students in translating research for
	health policy and advocacy
Health system management	Provides leadership and direction for the
	organisations that deliver health services in a
	detailed manner
RMNCH+ A	Details the fundamentals of reproductive
	health and nutrition for mother and child
